Video Title: Give me 7 minutes and i would force you to lock in this 2026

since Co a lot has changed the world
isn't the same as it used to be but not
exactly in a good way everything became
gray and pretty much colorless but so
did we somewhere along the way we
collectively lost a bit of spark and if
you're honest with yourself you probably
feel it too every New Year rolls around
and we always hear the same thing next
year will be my year for real except it
wasn't not in 2023 not in 2024 and it
won't be in 2025 either unless you force
it to be so spare me a bit of your time
and I'll force you to lock in for 2025
but just a quick disclaimer I'm not here
to motivate you motivation is a sugar
rush and I'm obviously not selling candy
I'm here to give you the tools
perspective and kick in the teeth you
need to make this your actual year like
for real now I'm not going to be too
hard on you I know you've been trying or
at least you think you have maybe you
started a bulking plan but quit after
two weeks because life got busy or you
set goals but they were vague enough to
be ignored like I want to be better
better at what breathing you've been
doing that since birth see trying isn't
enough if you're half assing it you're
not failing because life is unfair even
though yeah it is you're failing because
you're waiting for life to miraculously
align itself around your Vibes but it
won't you're the one who's got to align
themselves with their goals and to align
yourself you'll need to start where it
matters most your time you're probably
used to saying I don't have time that's
funny because you had time to scroll Tik
Tok for 3 hours yesterday you had time
to rewatch the same show for the fourth

time because it's absolute Cinema you
had time to stare at the ceiling
thinking about how you have no time did
you see it you have time you're just bad
at using it if we do the math you have
24 hours in a day let's say you sleep
for 8 hours if you're lucky work or
college for up to 8 as well and spend 2
hours eating and existing that leaves 6
hours now ask yourself what am I doing
with them if you can't answer that
without stuttering you found your
problem look we live in an era where you
can learn literally anything for free or
close to it feel like starting a
business there are tutorials templates
and even AI tools that'll practically
walk you through the process getting fit
or shredded there are apps YouTube
channels and communities that will keep
you accountable learning a new skill
platforms like coursera skillshare or
even Tik Tok if you're following the
right creators have you covered so why
are you using your phone to scroll
aimlessly instead of using it to level
up or clicking that subscribe button
below this video technology isn't the
enemy here you are your phone is a tool
but if you treat it like a toy it'll
treat you like a joke but even then
tools are just tools they're still
pretty useless without a plan which
brings us to my next Point systems
saying I want to save money is cute but
what's your plan are you tracking
expenses automating savings or are you
just hoping your bank account will
surprise you like a physics exam on
Monday the same goes for Fitness
learning relationships everything goals
are basically useless without systems
systems are what make you show up on the
days you don't feel like it they're the

boring routines that actually get results they're the meal preps the study schedules the workout plans they're what separate the people who achieve from the people who talk about achieving and while we're at it let's quickly address the ugly grind and why you should embrace it most of what will make you successful is not exciting it's boring it's repetitive it's waking up early to work out when you'd rather sleep it's saying no to plans so you can study it's putting in effort when no one's clapping for you the grind isn't supposed to feel good it's supposed to feel necessary and the sooner you stop expecting every step to be fun the sooner you'll start seeing results of course the grind doesn't have to be the good oldfashioned way times changed you need to be aware and recognize the massive potential and opportunities sitting right in front of you but you know what else is massive we are now living in the most resource Rich era of all time there's no excuse for being ignorant or stagnant you want to make more money lots of money- making opportunities are everywhere you want to learn coding public speaking singing dancing drawing editing animating writing talking to girls touching grass free tutorials exist you want to get better at anything Google it even if it's not always accurate you'll still learn something do you see it now you're not struggling because there's a lack of opportunities you're struggling because you're not grabbing them and no scrolling through success content isn't the same as actually taking action you might be watching this video and listening to my advice but are you actually putting in the work stop being a boring passive consumer of inspiration

and start being an active participant in your own life that being said there's still one problem you see people avoid taking real action because of this one particular idea of balance you've been sold this idea that you can balance everything perfectly work life growth rest actually it's not that easy and it's kind of overrated too if you want something badly enough you have to let other things slide collapse descend plummet that doesn't mean burning out but it does mean prioritizing like your life depends on it because it kind of does you're not going to achieve your goals by squeezing them into the cracks of your schedule they need to be front and center not an afterthought and in order to be able to do that you need to answer one big question am I really trying because it's easy to say you're trying but are you really or are you just dabbling there's a difference between effort and consistent effort one gets you short-term results if that and the other transforms your life be honest with yourself if you are not where you want to be is it because the world is against you or is it because you are not fully in that mentality are you you because you're the lamest or are you the lamest because you're you you can't half commit and then expect full results I'm not saying this is someone perfect because I'm not but I can confidently say I'm the best version of myself that I've ever been and a big part of that is because I stopped waiting for life to hand me success and started forcing it anyways my point is if I could do that what's the reason you can't I mean I'm pretty sure you and I are not so different look this is just a wakeup call a reminder I'm not going to end

this by saying something cheesy like
you've got this you might not have this
that's up to you but what I can say is
that if you decide to lock in like
really lock in 2025 can be the year you
stop saying next year will be my year
for real and start saying this year is
mine the world isn't going to fix itself
for you it's gray and colorless and that
sucks but you you're smart you're strong
you're adaptable and most of all you're
a CutiePie you can fix yourself and
maybe that'll bring a little color back
in everything else too so are you in or
are we having the same conversation next
year I mean you tell me

Video title: stopping procrastinating is ridiculously simple actually

you're procrastinating because you're
choosing to it's not because you're lazy
overworked or some helpless victim of
circumstance no you're putting things
off because you're avoiding discomfort
but lucky for you stopping
procrastination is surprisingly simple
you just don't want to hear it because
the truth isn't comfortable but if
you're serious about getting out of your
own way this is going to change your
life first let's call procrastination
Why you Procrastinate
what it really is avoidance you're
dodging something be it fear boredom or
effort the task you're doing feels too
hard too tedious or maybe you're just
scared you'll fail but the thing is
putting it off doesn't make it go away
it just builds pressure you think you're
avoiding discomfort but all you're doing
is trading short-term relief for
long-term stress it's like sticking a
Band-Aid on a bullet wound it doesn't
solve the problem it just delays the

inevitable you tell yourself you'll do
The Lie you tell yourself
it later but that's a lie you're not
going to magically wake up more
motivated tomorrow trust me you think I
work better under pressure but that's BS
too you don't work better you just work
faster because you have no choice in the
result quality often suffers because the
truth is you're not waiting for the
right time you're waiting for the work
to feel easy but it never will waiting
doesn't make hard tasks easier it just
gives you less time to do them that's
the truth so stop fooling yourself now
It's simple actually
here's the part you're not going to like
stopping procrastination is ridiculously
simple not necessarily easy simple all
you have to do is start that's it the
hardest part of any task isn't doing it
it's starting once you take that first
step momentum kicks in like that 3:00
a.m. water and the task becomes
manageable but the longer you sit there
thinking thinking about it the bigger
and scarier it feels the task itself is
not the problem it's your hesitation
think about it have you ever started
something and thought wow this is so
much worse than I imagined chances are
no starting is always easier than the
nightmare you built up in your head so
why the delay here's a strategy I
Just start
personally use myself for killing
procrastination I like to call it just
start method first set a timer for 10
minutes tell yourself I'm only going to
do this for 10 minutes if it sucks I can
stop guess what nine times out of 10 you
won't stop why because starting breaks
the mental block second do the easiest
part first don't over complicate it if

you need to write a paper just open the document and write the title and outline if you need to clean pick up one thing momentum is your best friend and small wins create big progress and lastly don't multitask procrastinators or should I say you love multitasking because it feels productive without actually accomplishing anything focus on one thing and block out everything else no Tik toks no YouTube no distractions No excuses

but let's address your excuses because I know they're coming I don't have time no you do you're just wasting it scrolling on your phone or binge watching Netflix everyone has the same 24 hours it's about how you use them I don't feel motivated guess what again motivation is a scam it's fleeting and unreliable stop waiting to feel like doing the work discipline gets the job done not motivation it's too hard sure some tasks are tough but avoiding them doesn't make them easier start small break it into steps and stop whining about it but what Build momentum

happens after you start how do you keep going simple build momentum think of momentum as a snowball it starts small but the more you roll with it the bigger bigger it gets every small action adds up you finished the title and outline great now tackle the next cleaned your room awesome now handle the papers momentum doesn't require Perfection it requires consistency the more you do the more confident you feel action creates confidence not the other way around you don't need to feel confident to start you just need to start to feel confident No Buts

but I'm too tired but I don't know where to start but what if I fail your butts

are excuses dressed up as reasons but
I'm too tired then do something small
even 5 minutes of progress is better
than nothing but I don't know where to
start start anywhere pick the easiest
most obvious thing and go from there but
what if I fail you might and that's fine
failure isn't the end it's feedback
failure makes you learn adapt and try
again sitting on your hands because
you're scared doesn't protect you it
just keeps you stuck stopping
It's a habit

procrastination is a habit not a
one-time thing and habits are built
through repetition start by tackling the
hardest thing first every morning this
is called eating the Frog and it works
because once the hardest task is out of
the way everything else feels easier but
as I said you can always do the easiest
part first set clear deadlines for
everything open-ended tasks breed
procrastination and of course reward
yourself after completing tasks your
brain loves dopamine so give it a reason
to associate finishing tasks with
pleasure I'm going to be brutally honest
The truth

with you nobody's coming to save you
your boss your parents your friends
they're not going to swoop in and force
you to get your act together it's on you
every time you procrastinate you're
choosing short-term Comfort over
long-term success and that's the real
tragedy remember that but the good news
is you have a choice every second you
waste is a second you could spend
building the life you want so stop
waiting for motivation Clarity or a sign
the only sign you need is this video get
up and start

Title: How to Actually Master Small Talk Even if You're an Introvert

you know the funny thing about small talk is that most people look at it like the opening band at a concert something you suffer through to get to the main event deep conversations the real connections that's what we all want right but if you leave your phone for 2 minutes and actually looked around you'd realize every interaction every relationship starts with small talk even your best friend started with so what classes are you taking or some equally awkward nonsense now here's an unpopular take small talk is not about what you say well for the most part it's actually more about making the other person feel like a Human Instead of a SIMS character waiting for input that's it you don't need a cheat code a script or even Charisma you need to learn one thing active observation okay I know it sounds like something a nerd would say but just hear me out active observation is about paying attention to the person in front of you like they're the only thing that exists in that moment not their Vibe not their Aura just the actual tangible details their shirt their drink the way they keep glancing at the clock like they'd rather be anywhere else you notice these things and then you comment on them in a way that invites not Demands a response that's it matter of fact I can just end this video right here but stay with me now trust me it'll be worth your while anyways let me explain why this works first people love to feel seen not in the cringe you're so deep and mysterious way but in the simple hey I noticed you exist way it's basic psychology humans are hardwired to

Crave acknowledgement second it's disarming when you make an observation you're not putting pressure on them to perform you're not hitting them with so what do you do or where do you see yourself in 5 years you're just tossing a ball in their Direction and seeing if they want to throw it back here's an example you're at a coffee shop and the person next to you is holding a book most people would say what are you reading because they think that's the polite thing to do wrong that's pressure you're asking them to explain justify or summarize and no one wants to do that instead you say that book looks like it's been through some things boom you've just made an observation and you've done it in a way that's neutral but interesting maybe they'll laugh and say yeah it's my third reread or maybe they'll say oh it's terrible I just want to finish it out of spite either way you've started a conversation without making them feel like they're being interviewed or let's say you're at a party which if you're an introvert is probably your worst nightmare someone walks by holding a plate of food that looks questionable instead of ignoring them or hiding in the corner you say is that the chicken it looks like it fought back again you're not asking a question you're making an observation and you're doing it in a way that invites humor maybe they'll laugh and agree maybe they'll even defend the chicken either way you've opened the door the beauty of active observation is that it works everywhere work meetings First Dates family gatherings you name it it's flexible it's simple and best of all it takes the focus off you you don't have to be Charming or witty you just have to

notice stuff and point it out simple as that but now that you know active observation is all about noticing the little things patterns details the stuff most people gloss over what if I told you there's a way to apply that same principle but for learning that's where today's sponsor comes in brilliant brilliant is kind of like active observation but instead of helping you learn how to notice people and talk to them it helps you notice patterns solve actual problems and pick up real skills whether it's math programming data analysis or even AI brilliant breaks it all down into interactive lessons that actually make sense for starters brilliant helps you build problem solving skills through well solving problems no boring lectures or rote memorization just real knowledge you can apply immediately not only that they also make it ridiculously easy to build a daily learning habit you can log in for just a few minutes tackle one or two lessons and come away feeling like you've actually accomplished something but let's say you're into math brilliant lets you start from the basics or you can also challenge yourself with Advanced topics it's the kind of learning that's actually applicable and useful in your everyday life or maybe you want to learn coding which I know a lot of you do based on your recent comments well their programming courses let you start building programs with python even from day one whether it's games apps or just impressing your friends with your new found nerd cred Brilliance got your back if you want to try brilliant for free for a full 30 days visit brilliant.org some unfiltered guy or by clicking the first link in the

description or you can scan the QR code right here you'll also get 20% off an annual premium subscription once again a big thanks to brilliant for sponsoring this video all right let's now talk about what this actually looks like in practice first you have to train yourself to notice details this means putting your phone down taking your headphones out and paying attention to your surroundings like you're the main character in a detective show what are people wearing what are they doing are they fidgeting checking their watch scrolling on their phone these little things tell you a lot second you need to practice turning those observations into comments this is where most people get stuck because they overthink it they worry about sounding weird or intrusive but the reality still remains no one cares as much as you think they do so when you see someone in a bright yellow jacket you can say that's a bold color choice I respect it done it doesn't need to be original you just have to open the door finally you have to get comfortable with silence not every observation will lead to a conversation and that's perfectly fine the point isn't to force anything it's to give people the opportunity to engage if they want to if they don't you move on no harm no foul the more you do this the easier it gets you start to realize that small talk doesn't mean impressing people or proving you're interesting it's about standing on your feet paying attention and making people feel seen that's it it's not that deep but it works and honestly once you get good at it it's kind of fun now you might be thinking this sounds way too simple to actually work but think about it when was the

last time someone genuinely noticed something about you and mentioned it in a non-weird way probably not recently the fact is people are too caught up in their own heads to notice anyone else so when you do it it's like a glitch in The Matrix people pay attention because they're not used to it let me give you another example you're at a Halloween party another introvert's worst nightmare and someone walks in wearing a tie with tiny rubber ducks on it most people would either ignore it or make a generic comment like nice Tie not you you're going to be different you're going to say okay I need to know the story behind the Ducks now you've made it personal you've turned their accessory into a conversation starter and you've done it in a way that makes them feel interesting this works with literally anything let's say you notice someone's shoes just say something like those look way too clean to be comfortable or what about their coffee order you can say that's a lot of whipped cream for someone who doesn't look like they're celebrating or even someone's dog you can just say something along the lines of I feel like your dog judges people and I respect that see you're not trying to be funny or clever you're just noticing things and turning them into somewhat interesting comments oh and one more thing you have to mean it people can smell fake interest from a mile away if you're only doing this because you think it's what you're supposed to do it won't work you have to genuinely care about the person or just something about that person in front of you even if it's just for 5 minutes and that's where a lot of introverts are just people in general get tripped up we

think we're bad at small talk cuz we don't like shallow conversations but Small Talk isn't shallow if you're actually paying attention it's just the first layer the more you practice active observation the more you'll realize that people are fascinating even when they're talking about boring stuff so whenever you're in a situation where small talk is inevitable and let's be real that's almost every social situation try active observation notice something comment on it and let the conversation unfold naturally there's no need to be the popular kid you just have to be present once you've nailed this something interesting happens Small Talk Stops feeling like a chore it becomes a game a fun game you start to enjoy noticing things and seeing how people react you stop worrying about what to say because you realize it doesn't matter what matters is showing up paying attention and making people feel scene that's the whole point so the next time you're in line at a coffee shop notice the person in front of you what are they wearing what are they holding how are they standing pick one thing make a comment and see what happens worst case they don't respond they get creeped out and you move on with your life best case you've just made a connection

Title : How to Learn Anything Faster Than Everyone
be honest you probably dreamed about how awesome it would be to learn anything instantly like snapping your fingers and boom you've got it maybe you wanted to learn how to do a flip to show off at school and catch your sixth grade crush's attention or maybe it was learning guitar piano random skills like running faster jumping higher or even

that Viral dance move from 2016
basically anything to be the cool kid
everyone noticed now as teenagers and
young adults what we want to learn might
be a lot different usually we want
something that will benefit us in the
long run something along the lines of
business language Tech or Sports the
problem is most of us are terrible at
learning efficiently it's not our fault
really schools taught us to memorize
facts for a test and then forget them
the moment the bell rang well
memorization isn't learning after all so
it makes sense learning is about
understanding applying and retaining
information so well that it feels like
second nature think back to when you
last tried to learn something maybe it
was a new language musical instrument or
a skill like coding what did you do
chances are you crammed you read a lot
or you watched a ton of tutorials and
then nothing's stuck why because most of
us focus on input reading watching
listening when we should be focusing on
output doing practicing and teaching
it's like trying to learn how to swim by
reading a book about swimming you might
know the theory but the first time you
hit the water you're going to sink
learning is mainly a contact sport you
have to get your hands dirty or in this
case wet let me just clear this up
before we continue not everything is
equally important the 80/20 rule also
known as the Pareto principle states that
80% of your results come from 20% of
your efforts when it comes to learning
this means you should focus on the core
principles that give you the biggest
return you want to learn a new language
don't even think about memorizing 10,000
words instead learn the 1,000 most

commonly used ones they make up 80% of everyday conversations already why to play guitar Master the basic chords before diving into complex solos in simple terms once you've got the essentials down everything else becomes easier and one technique that can help you master these Essentials faster is active recall basically instead of passively reviewing information you actively test yourself not necessarily new but it's very useful especially when preparing for an exam let's say you're trying to learn history instead of rereading the same paragraph about World War II for the 10th time close the book and try to recall what you just read it forces your brain to work harder which in return strengthens your memory think of it like lifting weights but for your brain if you just stare at the dumbbells you're not going to get stronger you're going to have to pick them up and do the work but that doesn't necessarily mean you should start overloading your brain cramming feels productive in the moment but it's a short-term solution the spacing effect on the other hand is a long-term game this principle states that you learn better when you spread out your study sessions over time ideally 30 to 60 minutes a day throughout the week if possible here's why every time you have to revisit a topic your brain has to dig it out of your storage the more times you do this the stronger the connection becomes it's like carving a path in the woods the first time through it's rough and overgrown but with each pass the path becomes clearer and clearer and eventually easier to navigate so instead of studying for 6 hours straight break it into 6 1hour sessions over a week

your brain and your sanity will thank you however as I mentioned previously you need to get your hands dirty or whatever in order to learn something effectively and that's exactly why why brilliant the sponsor of today's video is worth talking about brilliant is an Interactive Learning platform that actually helps you understand stuff by making you solve problems experiment and practice as you go with thousands of lessons in programming data analysis Ai and math all designed to help you learn faster and smarter the lessons are built by experts from places like MIT Google Microsoft and more so you know you're learning from the best what I really enjoyed about brilliant is that you're actually dragging dropping solving and testing things from the get-go a method proven to be six s more effective by the way plus with their Sleek mobile app I'm able to access these lessons anywhere no matter how much time I have and yes it's way more satisfying than staring at a textbook and hoping for the best their data analysis courses for example are perfect if you're curious about spotting Trends or making sense of real world data from places like Spotify or Airbnb or if coding's your thing their python lessons let you start building projects on day one it's practical useful and you guessed it faster so if you're like me who appreciates Hands-On learning head over to brilliant.org unfiltered guy or scan the QR code you see on your screens you'll get 30 days of brilliant for free plus 20% off an annual subscription in case you get fired up and decide to well get brilliant once again thanks to brilliant for sponsoring this video okay so remember the swimming analogy this is

where it really comes into play if you want to learn faster you need to practice but not just any practice deliberate practice deliberate practice means focusing on the areas where you're weakest not just coasting through what you already know it's uncomfortable sure but that's the growth happens for example if you're learning to draw don't just sketch the same anime character 69 times instead challenge yourself to draw hands faces perspectives or whatever you find hardest it'll be frustrating at first but you'll improve much faster that way another unpopular way that will significantly help you learn faster is to teach it it sounds counterintuitive I know how can you teach what you don't fully understand but that's the point you see when you teach you're forced to organize your thoughts and explain Concepts clear clearly this deepens your understanding and highlights any gaps in your knowledge plus if the person you're teaching asks questions it pushes you to think critically and problem solve you obviously don't have to get someone to sit and watch you stutter for hours just set up your phone camera record yourself and pretend that you're going to be uploading it on YouTube that way you'll think to yourself that hundreds of thousands of people might see your video and well encourage you to understand what you're teaching even more it's like the old saying you don't really know something until you can explain it to a 5-year-old on the other hand and engaging your other senses is another great way to truly understand something and make it second nature your brain loves variety the more senses you involve in the learning process the better you'll retain information for

instance say you're learning Spanish
don't just read the words listen to
native speakers around you watch Spanish
YouTube channels documentaries Etc then
write them down and speak them out loud
the combination of visual auditory and
kinesthetic inputs creates stronger
neural connections just like building a
house the more materials you use the
sturdier it'll be well most of the time
that said learning doesn't have to be
boring in fact the more fun you have the
faster you'll learn set small achievable
goals and reward yourself when you hit
them turn challenges into games compete
with a friend use apps that track your
progress and give you virtual badges it
might sound casual but your brain
thrives on dopamine every time you
achieve something no matter how big or
small it releases a little shot of this
feel-good chemical which motivates you
to keep going and although I said you
can use apps that gives you virtual
badges for achieving goals that can also
lead you to while switching to Tik Tok
or YouTube the second you lose focus
that's why in order to keep the momentum
going you might want to try putting your
phone on silent or closing unnecessary
tabs and creating a distraction free
environment multitasking might make you
feel productive but it's kind of BS your
brain can only focus on one thing at a
time so instead of half reading a book
while scrolling Instagram try to give
your full attention to the task at hand
but here's where we need to start
glazing the proper sleep and enough rest
both are just as important as effort
your brain needs time to process and
consolidate information and the best way
to do that is through sleep during sleep
your brain organizes everything you've

learned strengthening connections and clearing out unnecessary informations so if you're pulling all nighters to cram you're actually sabotaging yourself taking regular breaks during study sessions can boost your productivity too our brain just like our muscles it needs time to recover after intense use and since we're already here let's talk about mindset if you believe you're bad at learning you'll struggle obviously so but if you adopt a growth mindset the belief that you can improve with effort you'll be amazed at what you can achieve instead of thinking I can't do this try saying I can't do this yet that one little word makes a world of difference it shifts your focus from failure to potential and most importantly enjoy the process because at the end of the day learning is not all about acquiring new skills it's about you growing as a person and that is pretty simple Actually

Title: Fastest and easiest way to get job:

finding your first job might feel like navigating a maze blindfolded especially in 2025 where the need for fresh graduates with 25 plus years of experience dominates the process I've been through the same grind myself and I've seen what works and what doesn't in this video I'll show you how to stand out from crafting the perfect resume to using tools and networking in ways that actually work so by the end of this video you'll have a clear step-by-step game plan to not just apply for jobs but hopefully get one when most people start yapping 2 their job search they fall into the same traps they mass apply to dozens of roles

or using the same generic resume for every application then they wait and wait and wait and wonder why no one responds as simple as it sounds that's actually the problem it's simply not knowing how the modern hiring process works you see most companies use applicant tracking systems to filter resumés these systems automatically reject applications that don't match specific keywords so even if you're perfect for the job your resume might never even be seen by a human meanwhile studies show that 70 to 85% of jobs are filled through networking not online applications therefore if you're relying solely on job boards you're missing out on most opportunities but don't worry this isn't as overwhelming as it sounds presenting your offer before applying for any job you need to know what you're bringing to the table employers want someone who can solve their problems not just some warm body to fill a role to figure out what you offer you can start with this simple exercise first write down three skills you're good at don't overthink it literally just jot down any skill that comes to mind next identify one specific way each skill could benefit a company think about the value you could bring doesn't matter what area then third think of real examples that prove you have these skills for example if you're great at graphic design your proof could be creating posters for a school event or designing social media graphics for a friend's small business if you're organized maybe you managed a project in college or planned a group trip don't worry if you feel like your skills are too basic the key is framing them in a way that highlights value for instance

instead of saying I know how to use Excel you could say I created a budget tracking system that saved my club \$500 small shifts like this can make a big resume that stands out difference now that you know what you offer it's time to create a resume that showcases it most RS fail because they're generic and unfocused recruiters spend about 6 seconds scanning a resume before deciding if it's worth reading further so yours needs to grab attention immediately here's how you can do it number one use keywords start by analyzing the job description if it mentions skills like data analysis or customer service make sure those words appear in your resume number two highlight Achievements not tasks don't just list responsibilities like handled customer inquiries instead write resolved 50 Plus customer inquiries daily improving satisfaction rates by 15% number three keep it clean avoid flashy designs or fonts applicant tracking systems or ATS often can't read them stick to a simple format that's easy for both humans and Bots to read on the other hand your resume should be tailored to each job yes it takes more effort but it dramatically increases your chances of getting noticed tools like canva and zti offer ATS friendly templates that can save you time now that you have a solid resume networking (even introverts) it's time to make sure it gets seen and networking is how you make that happen networking is one of the most effective ways to land a job and it doesn't have to be as intimidating as it sounds it's simply building genuine connections with people who can offer insights or refer you to opportunities in the future

that's where the real gold mine is by reaching out to the right people you're opening doors that job boards simply can't start with people you already know tell your friends family or professors that you're job hunting you don't need to ask them for a job directly instead say something like I'm looking for opportunities in this or that field do you know anyone I could talk to for advice if you don't have existing connections LinkedIn is always one of the best place to go personalize your connection requests by mentioning something specific like a project the person worked on or an article they shared once they accept ask for a brief chat to learn about their career these conversations often lead to referrals or valuable insights social media and even social Media and AI

AI are no longer just options in your job hunt tools like Chad GPT can help you improve your resume write personalized cover letters or even prepare for interviews for example you can paste a job description into Chad GPT and ask it to rewrite your resume to better match the role then you do the cleanup process you don't need to rely on AI entirely but you can use it to help refine your content AI can improve your grammar make your writing more concise and ensure it's clear and professional especially if it's your first time just remember the content should still be your own AI is there to enhance it not replace it as for social media LinkedIn is the obvious choice when it comes to job hunts especially online but platforms like Twitter and Tik Tok can also be powerful if used strategically share posts about your skills industry insights or personal

projects for instance if you're into coding post about a small app you built or if you're a writer share Snippets of your work it's very important to be mindful of your online presence employers often check social media profiles so make sure yours aligns with the professional image you want to present and I'm sure I don't need to remind you of your digital Footprints right

right once you've landed an interview acing the interview the real work begins remember the goal is not just to prove you're qualified it's to show you're great fit for the team here's a simple framework to prepare research the company before going to the interview itself make sure to look into their mission values and recent news this shows you're genuinely interested practice common questions use the star method situation task action result to answer behavioral questions for example tell me about a time you solved a problem becomes a story with a clear beginning middle and end ask questions interviews are a two-way street ask about the team's Dynamics challenges is or what success looks like in the role in the end preparation is key the more you practice the more confident you'll feel walking into that room or Zoom call but even if you've following up

nailed your answers and made a great impression what happens next can make all the difference here's where staying on top of things and following up properly can set you apart from the competition see most people think the process ends after the interview but following up is just as important simply send a thank you email within 24 hours

mentioning something specific you discussed this not only shows appreciation but keeps you top of mind if you don't hear back don't assume the worst follow up again after a week with a polite email expressing continued interest persistence when done professionally often pays off finding extras

your first job doesn't have to be overwhelming with the right strategy knowing your strengths tailoring your resume leveraging tools available networking effectively en nailing the interview you can pretty much take control of the process it's also crucial to stay adaptable As you move forward sometimes the traditional route might be the best fit and that's okay as you explore opportunities think about how your skills could be applied in unconventional ways like freelancing side projects or even building your own brand with the rise of remote work and gig economy platforms the traditional 9 to5 isn't the only path anymore another thing to keep in mind is that job searching doesn't happen in a vacuum stay open to feedback learn from your experiences and keep improving that could be tweaking your resume or adjusting your approach to interviews every step you take matters the key is consistency not Perfection there's no outro

shame in finding a corporate or traditional job either even in today's world where many are self-employed or making money online the job market is Broad and whether you're aiming for a traditional position or more flexible career path your skills are the foundation focus on building them and the right opportunities will follow now

once you've got a game plan for your job search you might realize that getting started is the hardest part but that's where momentum kicks in and if you're struggling to get going or keep yourself on track here's another video that will show you exactly how to stop putting things off
